

**SECURITY ALARM CORPORATION**

**FOR IMMEDIATE RELEASE**

**August 20, 2020**

**PORT CHARLOTTE, FLORIDA**

---

## **YOUR PARTNER IN PROTECTION**

**SECURITY ALARM CORPORATION** announces launch of the best remote security camera solution with cellular self-monitoring video surveillance for jobsites and remote structures:

- ✓ Construction Sites
- ✓ Industrial Parks
- ✓ Supply and Material Stockpiles
- ✓ Outbuildings
- ✓ Vacant Properties

This is the world's best completely wireless solution with complete security and alerts. Receiving dependable information is vital to maintain credible security. The system operates on an intelligent SaaS platform that uses unique and failsafe methods via the cloud to send, receive, monitor, and manage alarms. Handles, processes, and delivers alerts directly to any number of your own designated computers or mobile devices. When motion is detected, an alert will be sent directly to the designee's cell phone along with an image of intruder. Designee can then notify authorities immediately when needed. Fully audited so you know when and who has answered the alert. Does not rely on 'Send and Forget' type technologies such as email or SMS used by our competitors.

Features:

- ✓ Cable Free Installation
- ✓ Battery Powered
- ✓ Fully Cell Signal Enabled
- ✓ Infrared for Day & Night Imaging
- ✓ Fully Mobile for Temporary Application and Relocation
- ✓ Low Monthly Monitoring Fee

**Security Alarm Corporation** will:

- ✓ Mount Camera at Selected Location at Approximately 9 Feet Above Ground (Pole, Post or Structure to be Provided by User)
- ✓ Program Camera(s) to Notify Designee That Will be Monitoring Camera(s)
- ✓ Assist in Loading Phone Application on Designee's Phone

If you need to know, you need **Security Alarm Corporation!**

SECURITY ALARM CORPORATION

**SAC** has seen a growth in construction contracts after they established a full-service rental and monitoring program by adopting **webeyeOCULi** with **webeyeCMS**.

## OVERVIEW

For over 40 years Security Alarm Corporation has provided security systems to the Southwest Florida building industry. Protecting new construction sites is a growing portion of the Company's business as local builders were plagued with job site theft and vandalism. As construction activity continued to grow, SAC were looking for a viable solution to help combat the situation. Adopting OCULi integrated with webeyeCMS has quickly enabled them to respond to their customer needs and establish a full-service rental and monitoring program.

**"Webeye technology is the perfect solution to protect difficult environments"**

## SECURITY ALARM CORPORATION

### Challenge

As a premier supplier of security solutions in Southwest Florida, the building industry looked to Security Alarm Corporation to provide a viable solution to protect construction sites. The challenge was to provide a reliable security system in an environment void of electrical power or enclosed structures.

### Solution

Webeye has fully wireless and battery powered technology, making it the perfect solution to protect very difficult environments. Their visual verification system can be rapidly deployed to any construction site or other remote areas in need of video surveillance. Once an intrusion is detected it triggers the motion viewer which records a video clip and sends, via the webeyeCMS cloud platform, to the SEC Central Monitoring Station and, if required, to the end user. webeyeCMS takes the hassle out of monitoring and managing alarms. It is virtual central monitoring solution to receive, process and distribute all alarm traffic.

### Benefit

The technology in Webeye has allowed SAC to protect very difficult environments and because the product can be rapidly deployed it has improved efficiency and reduced time wasting. The solution reduces complexity which has enabled SEC to speed up their operation and become even more competitive.

### webeyeCMS does more than just send alarm notifications:

- It stops operators wasting time dealing with false alarms because it uses CALIPSA deep learning video analytics to verify genuine human or vehicle activity
- It performs a 'health check' on SEC equipment to see if any part of their system is failing - if batteries are running low for example
- It has a thorough audit trail so SEC can see which alarm operator and when they responded to an alarm notification and a log to see what action was taken
- It has an easy view timeline bar to quickly monitor all alarm history from a particular site.

### Result

Security Alarm Corporation has now established a full-service rental and monitoring program which includes installation, support services, and remote notifications to accommodate the needs of builders.

## **Jobsite Security Cameras with Cellular Monitoring**

### **How it works,**

- Security Alarm Corporation programs camera (s) to notify the builder's designee when motion is detected
- Security Alarm Corporation will assist builder in loading the phone app
- When motion is detected on the jobsite an alert will be sent to the designee's cell phone along with an image of the intruder
- The builder's designee will need to notify the authorities if needed.
- Cameras work day or night, no additional lighting needed

### **Construction Site Camera Rental Pricing**

Initial Site Install	\$100.00
Monthly Rental and phone remote access service	\$49.95 per Camera
Relocation Fee to Another Site (Same Builder)	\$50.00 per Camera
Service call or battery replacement trip charge	\$80.00 (if required)

***Builders will provide a location for mounting (pole or post) at approximately 9 ft above the ground***
